AI & Digital Marketing Master Course – 4 Months + 2 Months Free Internship

What You Should Have by Week 16

Do You Know What You Are Really Paying For?

Let us ask you something honest. When you look at a digital marketing course, what do you check first? The syllabus? The fees? The certificate? Most people do exactly that, and we do not blame them, because those are the things every course page puts in front of you. But here is what we have learned from thinking about this a lot: the syllabus tells you what a teacher will say over the coming weeks. It never tells you what you will be able to do when the classes are over. And that second thing is the only thing that an employer, a client or your own growing business will ever care about. Nobody hiring a marketer asks to see a list of topics that were covered. They ask to see what you have built, what result it brought, and whether you can explain your decisions clearly. This article is written to help you look at any course, including ours, through that lens, so that you spend your time and money on skills you can actually prove.

The Day 112 Test

Our Master Course runs for 16 weeks (4 months), and 16 weeks is exactly 112 days. So we use a very simple test, and we would like you to use it on every institute you visit, including us. On Day 112, can you open a laptop and prove your skills in five minutes? We do not mean talking about what you studied, or showing a certificate, or repeating the names of tools. We mean showing a live page that you built, a campaign that you set up and can explain, a video that you edited, a set of designs that look like they belong to one brand. If a course cannot clearly tell you what you will be able to show on its last day, then you are most likely buying notes and recordings, not skills. A good course should be able to answer this question without hesitation, because the whole program should have been built backwards from it.

And the journey does not stop on Day 112. After the 4-month course, you move into a **2-month free internship**, where you apply everything on real work and keep adding to your portfolio.

What Should You Be Able to Show?

To make the Day 112 Test practical, here is the checklist we would want for ourselves if we were the student. It covers the seven skills of our course: SEO, social media, performance marketing, website development, graphic design with Photoshop, video editing, and AI tools with marketing basics. For each skill, the table says what you should be able to show and what proof another person can check for themselves. Please treat this as a yardstick that you can hold against any course in India, not as a promise of results, because your final outcome will always depend on how much you practise, how often you ask for feedback and how seriously you treat each project.

Skill	What you should be able to show	Proof anyone can check
SEO	A keyword plan and one page you optimised yourself	The written plan and the live page
Social media (SMO)	A 30-day content calendar and an account you actually ran	Posts, the calendar and a simple growth log
Performance marketing	A Meta or Google campaign with a short result report	Account structure screenshots and cost-per-result notes

Skill	What you should be able to show	Proof anyone can check
Website development	A working business site or landing page	A live link
Graphic design + Photoshop	A set of creatives in one consistent brand style	A folder of finished posts and banners
Video editing	A Reel, a YouTube video and a brand story	Playable links
AI tools + basics	A documented AI workflow with your prompts	Before and after examples showing your edits

Next time you speak to an institute, read these seven rows aloud and ask, “Which of these will I finish, and who will check my work?” If the answer is vague, or if they start talking about the number of videos or the hours of recording instead, you have learned something very important before spending a single rupee. A confident answer will name the project, the mentor and the week in which it happens.

Let Us Show You: One Campaign, Seven Skills

Here is something many beginners do not realise until they start working: real marketing never uses one skill at a time. A single small project quietly pulls in research, design, writing, video, a website, search, social media and paid ads, all at once and all depending on each other. If one piece is weak, the whole campaign feels weak. So let us walk you through an illustrative example, and please remember that it is only an example and not a real client, so that you can see how all seven skills connect in practice. Imagine a neighbourhood sweet shop that wants more online orders for the festival season. What would you do, step by step?

1. **Research (AI tools):** use ChatGPT to understand what customers ask before festivals, what the competitors are offering and which gift boxes people search for. Then check every claim yourself, because AI can sound confident and still be wrong.
2. **Website:** build a simple, fast order page with a clear order button, the shop's phone number and the sweets with their prices, so that a visitor never has to wonder what to do next.
3. **Design:** create festival posts and banners in Photoshop, all in one consistent style with the same colours, fonts and logo placement, so that people recognise the shop at a glance.
4. **Video:** edit a short 20-second Reel of the sweets being packed, with clear text on screen and sound that suits the mood, because short video is what stops people from scrolling.
5. **SEO:** think about the words a local buyer would type into Google, then write the order page and its headings around those words in a natural and helpful way.
6. **Social media:** plan and schedule posts and Reels across a whole month, mixing offers, behind-the-scenes content and customer stories so the page never feels like only advertising.
7. **Performance marketing:** run a small paid campaign that sends people to the order page, then track what each order costs you so that you know whether to spend more or change the ad.

Now imagine explaining this whole project in an interview: what worked, what failed, what you tested and what you would change next time. That is the moment when people get hired, because it proves that you can think, not just click buttons. This is exactly the kind of experience we want every student to walk in with, and it is the reason our course teaches all seven skills together instead of one skill in isolation. With the 2-month internship that follows the course, you get time to repeat this kind of project on real work, not just once but several times.

Before You Pay Anyone, Ask These 5 Questions

We would much rather you choose well than choose us in a hurry. A decision about your career deserves a little homework, and the good news is that you only need five questions to separate a serious institute from a weak one. Please ask them politely but clearly to every place you visit, including ours, and notice how comfortable and specific the answers are. A good institute will be happy to be questioned and will answer with examples. A weak one will answer with slogans.

1. **Can I see the work of a past batch?** Look for finished projects such as live pages, ad reports and edited videos, not just photographs of certificates or classrooms.
2. **How many students are in one batch?** Fewer students means a mentor can actually look at your work and give feedback that is specific to you, instead of speaking to a crowd.
3. **Who will review my campaign, and how often?** Ask for a named mentor and a fixed schedule, because feedback that happens only when someone has time rarely happens at all.
4. **Which tools will I use myself?** You should be the one running the ad account, editing the video and building the page, because watching someone else do it teaches far less.
5. **What does placement support actually include?** Ask about interviews, resume help, internships and introductions to hiring companies, and be careful with anyone who guarantees you a job, since no honest institute can promise that.

How We Build Toward Day 112 at RizeWorld

The RizeWorld Master Course is a 16-week (4-month) program with 7 modules: SEO, SMO, performance marketing, website development, graphic design with Photoshop, video editing, and AI tools with digital marketing basics. After the course, you continue with a 2-month free internship. We designed the whole program around the idea you have just read, which is that a student should finish with proof and not only with knowledge. Learning happens in a small group, through live projects and real client briefs, with mentors who work in the industry and who look at your actual work. Here is what that means for you in practice:

- **Small batches:** a maximum of 20 students in every batch, so that we can genuinely look at your work, answer your questions and notice when you are stuck.
- **Live, project-based learning:** real client briefs and portfolio-building sessions, so that you build something you can show instead of only taking notes.
- **Mentorship:** expert-led classes and 1-on-1 mentor calls, so that you get personal guidance on your own projects and your own career questions.
- **2-month free internship:** after you complete the 4-month course, you work on real tasks for two more months at no extra cost, so that you gain practical experience and grow your portfolio.
- **Career support:** placement assistance, internship support, resume-building workshops, mock interviews and access to our partner agency network, so that you are prepared for the moment you start applying.
- **2 certificates on completion:** the RizeWorld Institute Course Certificate and a Digital Marketing Certificate.
- **After the course:** lifetime community access, so that you are never learning alone and can keep growing with other marketers.

4 Mistakes That Slow Beginners Down

Whether you join us or learn somewhere else, we want you to avoid these four common mistakes from the very first week, because each one can cost you months of effort. None of them is a sign that you are not talented. They simply happen when a beginner does not yet know what to focus on, and knowing them in advance can save you a lot of time, money and frustration.

- **Learning tools before the goal.** A beautiful ad shown to the wrong audience still fails. Before you open any software, decide who you are talking to, what you want them to do and how you will know it worked.
- **Mastering only one channel.** If you know only SEO or only social media, you will struggle when a client needs a complete plan. Learning how the channels support each other makes you far more useful and far harder to replace.
- **Copying AI output.** AI writes and designs fast, but people hire the person who can judge, correct and improve what it produces. Use it as a helper that saves time, and keep your own thinking in charge.
- **Keeping no record.** Save screenshots, links and notes while you work. A portfolio is built a little every week, and trying to collect everything in the final week usually produces a rushed and weak result.

Is This Course Right for You? An Honest Answer

It is a good fit if you are a student, a fresher, someone switching careers, a freelancer or a business owner, and you are ready to practise every week and to show your work to others so that you can get feedback. You do not need any earlier experience in marketing, because the program starts from the basics. What you do need is curiosity, regular time for projects and the willingness to try, fail and try again, because that is how every good marketer learns.

It may not be right for you if you are looking for a guaranteed job without practice, or if you cannot give regular time to your projects. Digital marketing rewards people who keep testing, measuring and improving, and it is much more a skill built by doing than a subject learned by listening. We would rather tell you this honestly now than have you discover it after enrolling, because we want every student who joins to be someone who will truly benefit.

Questions We Often Hear

Do I need experience before joining?

No, you do not. We start from the basics and explain every concept step by step, and the website module includes no-code tools, so you can build pages even if you have never written a line of code. What matters most is that you are willing to practise regularly and ask questions whenever something is unclear.

How long is the course?

The Master Course runs for 16 weeks, which is 4 months, and it covers all 7 modules: SEO, SMO, performance marketing, website development, graphic design with Photoshop, video editing, and AI tools with digital marketing basics. After that, you get a 2-month free internship.

Is the internship really free?

Yes. The 2-month internship after course completion comes at no extra cost, and it is meant to give you hands-on experience with real work so that your portfolio grows even more.

What will I have at the end?

You will have a portfolio of project work that you can show to employers and clients, two certificates (the RizeWorld Institute Course Certificate and a Digital Marketing Certificate), internship experience, resume and interview practice, and lifetime access to our community, where you can keep learning and sharing with other marketers.

Is placement guaranteed?

We will be straight with you: no institute can honestly guarantee a job, and you should be careful with anyone who does. What we offer is placement assistance, which means real support with interviews, internships, resume building and our partner agency network. Your final results will still depend on your effort, your practice and the quality of the work you build.

How do I join?

The first step is to book a free counselling session. We will show you the curriculum, answer your questions, explain how the batches work and help you decide whether the course fits your goals, with no pressure to decide on the same day.

Let's Talk. Your Free Counselling Session Is Waiting

We keep every batch to 20 seats so that each student receives proper attention, which also means that seats can fill up faster than people expect. So come and meet us, ask all your questions, look at the way we teach and see the work for yourself before you decide anything. We would love to help you reach your own Day 112, and then carry that momentum through a 2-month internship, with a portfolio you are proud of and the confidence to show it to anyone. You can reach us in any of the ways below, and we will be happy to guide you.
